SME, Data Analytics
Technomics, Inc.

The overall classification of this briefing is:
UNCLASSIFIED

Purpose / Agenda

OSD CAPE

Purpose:

- Bring awareness of the Cerberus Training Dataset to the cost estimating community.

- Encourage cost estimators to utilize the Cerberus Training Dataset in their training, papers, when demoing and developing cost estimating and analysis tools and techniques.

Agenda:

- The motivation behind the Cerberus Training Dataset

- Introduction to the "Cerberus Autonomous Vehicle Program"

- Files contained in "Cerberus Training Dataset v1.0"

- Samples of "Cerberus Training Dataset v1.0"

- How the Cerberus Training Dataset was created

- Where to find/download the dataset

- Call to Action: "We built this and think you should use it!"

Motivation To Create The Cerberus Training Dataset

OSD CAPE

- Cost estimating and analysis regularly involves the use of proprietary or sensitive data.
  - Estimators often cannot share their results or provide meaningful examples of techniques or methods since doing so may disclose sensitive data to unauthorized personnel.
  - Replacing real data with fake data/noise might enable sharing but may remove the interesting finding that was meant to be shared.

- Historically, non-proprietary sample datasets have been smaller and less complex than what will be encountered in the real world.
  - "Small and simple" is a feature early in a training program but limits overall learning opportunities.
  - Sample datasets rarely, if ever, include multiple submissions over time or include multiple related files which can (or should) be cross-referenced against each other.

- Data science practitioners often share examples of their code or tools on well known datasets which have become ubiquitous in these communities.
  - When the underlying data is well known, it becomes easier to understand, train, or feature an interesting aspect of a new tool or technique.

# ... with 22 more rows
```

Overall Goal: Create an equivalent to the `iris` or `mtcars` datasets for the cost estimating and analysis community.

Cerberus Program Overview

Fictional Program Information

- Service/Commodity: *Army Ground Vehicle Program*

- Acquisition Pathway: *Major Capability Acquisition (ACAT-I)*

- Program Timeframe:
  - *Engineering and Manufacturing Development (EMD)*
  - *Low Rate Initial Production (LRIP)*

- Contract Overview:
  - *Single Award FAR 15 Indefinite Delivery / Indefinite Quantity (IDIQ)*
  - *Firm Fixed Price (FFP) design and production CLINs*
  - *Cost Plus Fixed Fee (CPFF) Total Package Fielding and Contractor Logistics Support CLINs*

Realistic Narrative

- Deliverables show cost growth between "Initial" and "Final" submissions. Cost growth can clearly be attributed to software development "issues discovered during program testing".

Optionally Manned Fighting Vehicle
Multiple Main Armaments

Cerberus Program Overview (cont.)

OSD CAPE

Why "Cerberus"?

- From Greek Mythology: Cerberus is Hades' three-headed guard dog of the underworld

Credit: The Metropolitan Museum of Art

- The Cerberus Autonomous Vehicle has three armaments
  - 30mm turret (provided as Government Furnished Equipment)
  - 50 cal Remote Weapon Station (RWS)
  - Anti-tank, fire-and-forget rocket (e.g., Javelin) mounted to RWS

Example Contract Language

Sample Results: Time-Phased Total Contract Cost

OSD CAPE

Cerberus deliverables contain realistic time-phasing of costs and hours based on SME experience in this commodity.
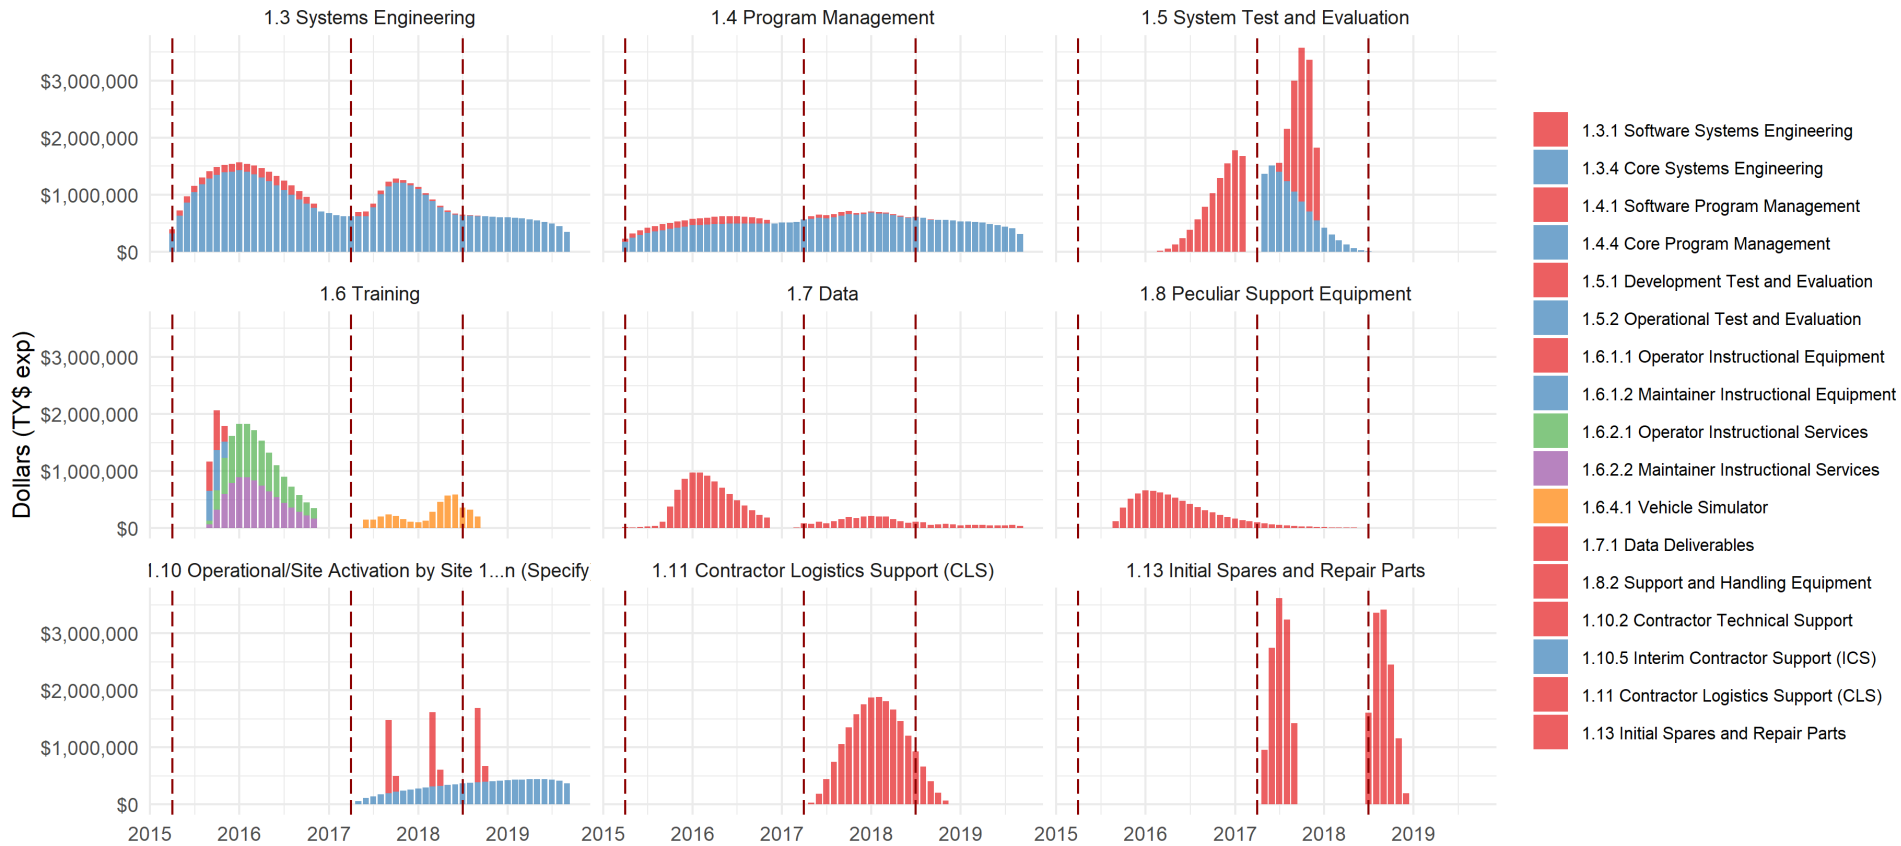

Cerberus Total Contract Cost via Final Submission Event // WBS 1.0 - Cerberus Autonomous Vehicles

Sample Results: Cerberus Common WBS Elements Costs

OSD CAPE

## Time-phasing and distribution of costs are extended to Common WBS elements as well.

Sample Results: Labor Rates by Functional Category

OSD CAPE

Multiple labor and overhead rates are utilized and are consistent between FlexFile and DD Form 1921-3 submissions.
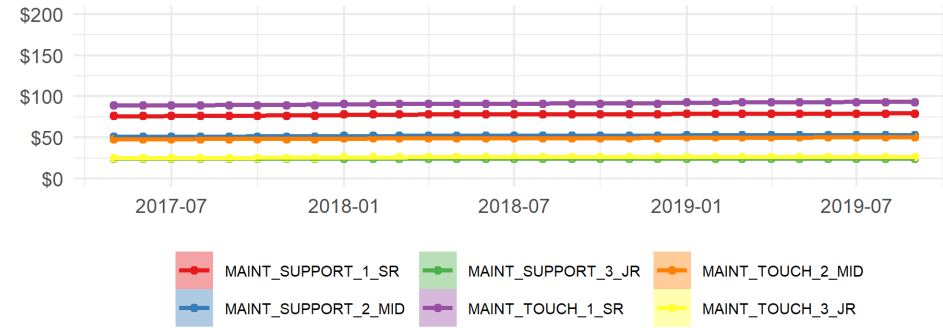

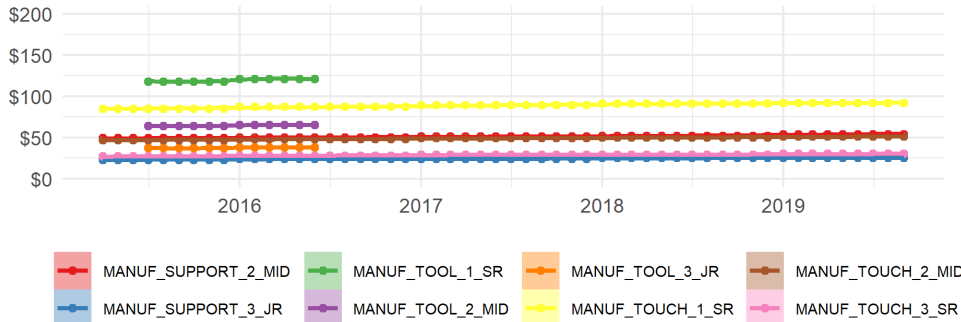

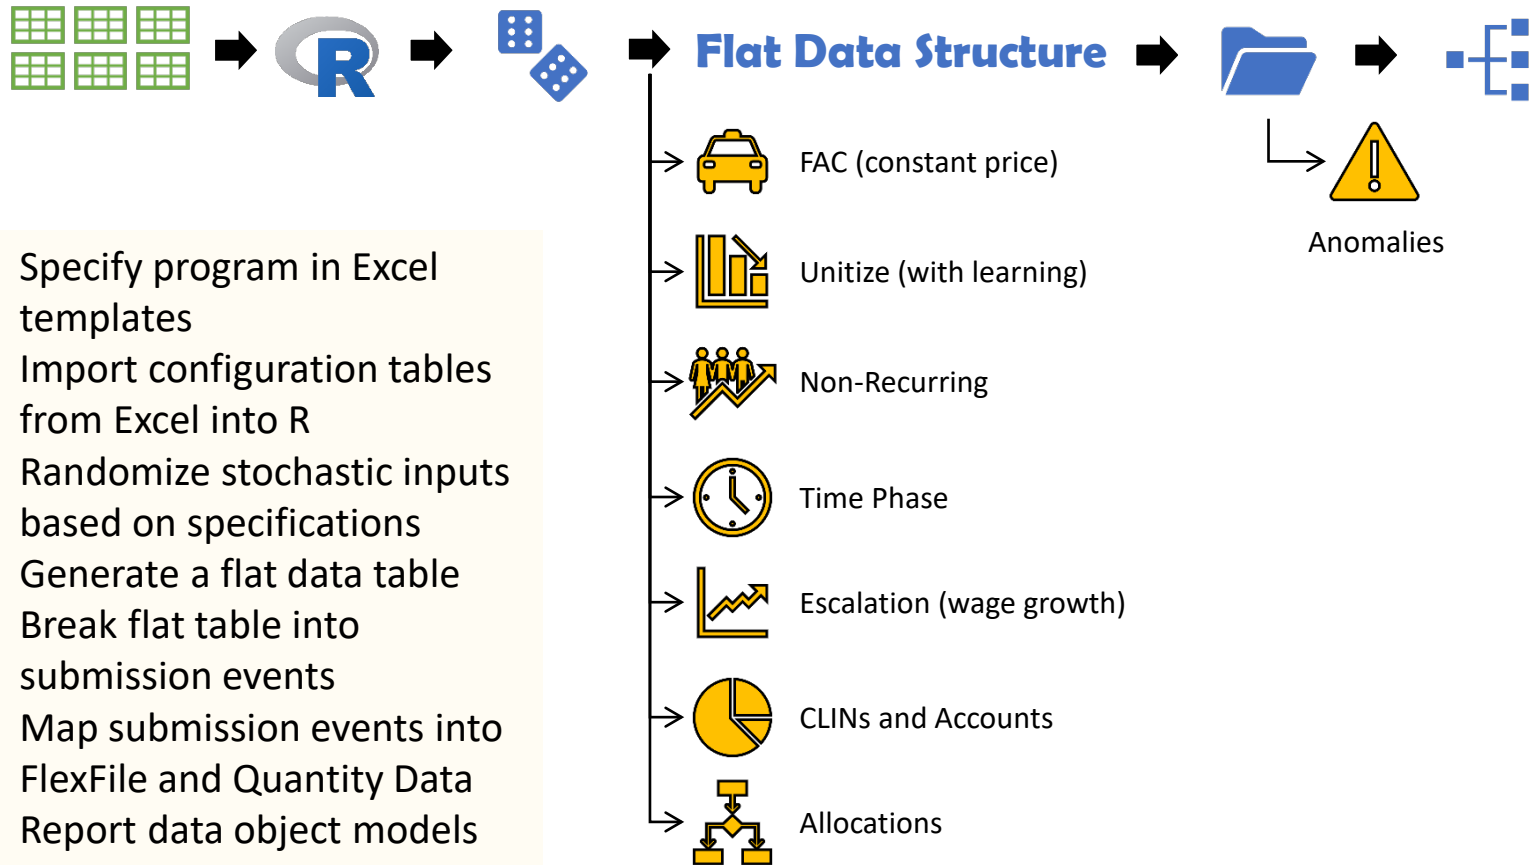

Sample Results: End Item Cost Phasing

OSD CAPE

Each Cerberus End Item…

- Follows a realistic learning curve based on SME experience in this commodity.
- Shows signs of an EMD to LRIP step-down.
- Includes random noise between units for additional realism.
- Follows a simulated production schedule based on an overall production hours capacity.

Data Generation Methodology: Overview

OSD CAPE

Flat Data Structure

- FAC (constant price)
- Unitize (with learning)
- Non-Recurring
- Time Phase
- Escalation (wage growth)
- CLINs and Accounts
- Allocations

Anomalies

1. Specify program in Excel templates
2. Import configuration tables from Excel into R
3. Randomize stochastic inputs based on specifications
4. Generate a flat data table
5. Break flat table into submission events
6. Map submission events into FlexFile and Quantity Data Report data object models

Nothing specific to Cerberus is coded into R. Everything is controlled in the configuration tables! (You can specify an entirely new program/commodity)

Data Generation Methodology: Primary Model Components

OSD CAPE

Inputs are contained in an Excel configuration file. Changes are made to dataset by updating and re-running the simulation.
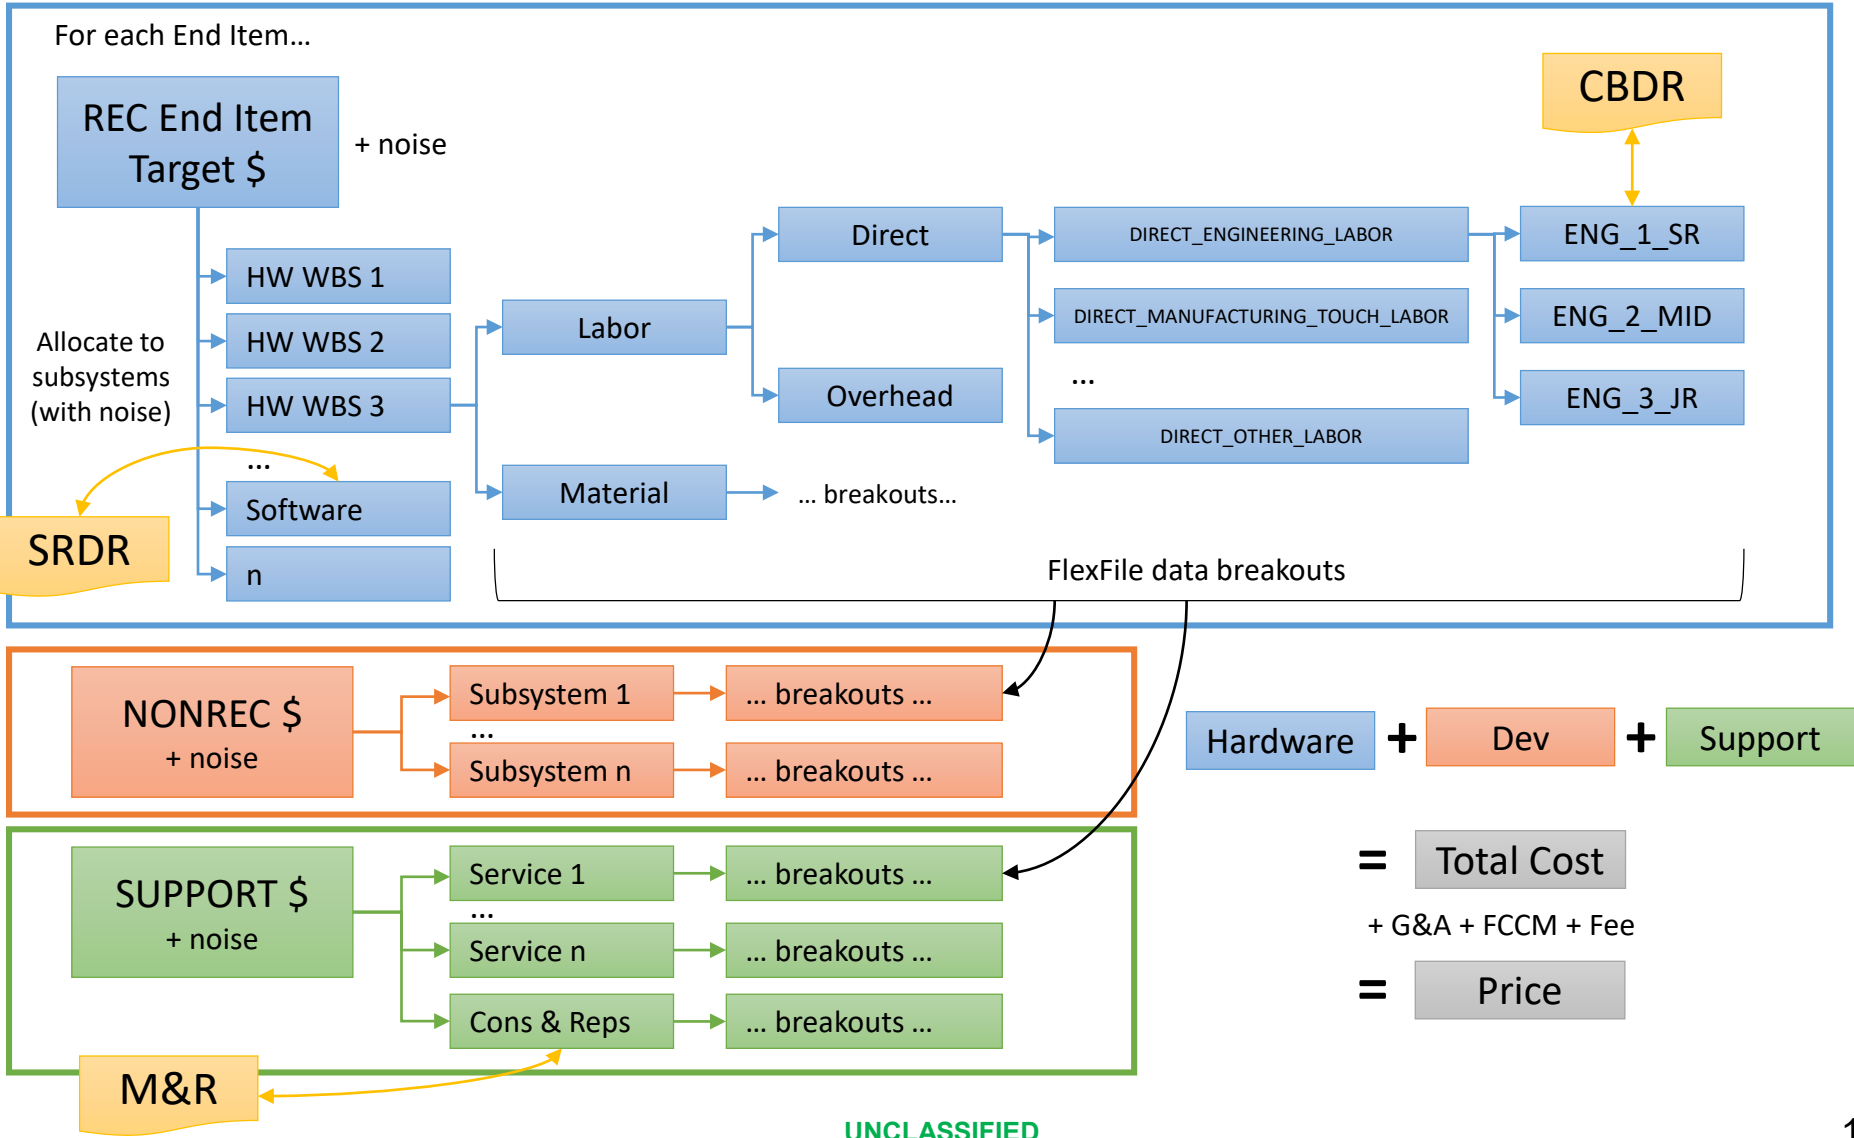

Cost Definition Option Examples

1. An amount specified by and drawn from a probability distribution:

   a) $2,000,000 for 1.1.1 Surface Vehicle, specified as ~ `Norm(mu = 2000000, sd = 100000)`

   b) $100,000 for a support element, specified as ~ `Uniform(a = 100000, b = 100000)`

2. An amount allocated from a parent WBS from a Dirichlet distribution:

   a) The 1.1.1 Surface Vehicle costs allocated down to its 1.1.1.X hardware subsystems

   b) Generally anything that is easier specified from a higher level and allocated down to children

Dirichlet Distribution — alpha0 = 100

Shape: v1 (20%), v2 (40%), v3 (30%)
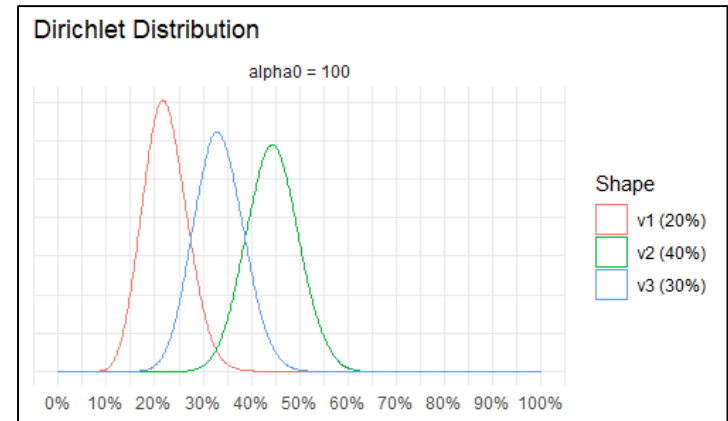

3. An amount derived as a factor off a base

   a) Project Management costs as 10% of the recurring 1.1.1 Surface Vehicle cost , specified as ~ `Uniform(a = 0.08, b = 0.12)`

   b) Any other support factor specified as a percentage of a base

* The Dirichlet distribution is essentially a multivariate beta distribution where the resulting sample vectors *always sum to 1*. This makes it convenient to draw from where applying allocations.

Example Input Sheet: Learning

end_item	slope	rate	n_steady	cv
2_GPV	0.97	1	1000	0.025
3_RV	0.97	1	1000	0.025
4_SSV	0.97	1	1000	0.025
5_cbk	0.99	1	1000	0.025
6_cjak	0.99	1	1000	0.025
7_wk	1	1	1000	0.025

```
> cerberus::cerberus$learning
# A tibble: 6 x 5
  end_item slope  rate n_steady    cv
  <chr>    <dbl> <dbl>    <dbl> <dbl>
1 2_GPV     0.97     1     1000 0.025
2 3_RV      0.97     1     1000 0.025
3 4_SSV     0.97     1     1000 0.025
4 5_cbk     0.99     1     1000 0.025
5 6_cjak    0.99     1     1000 0.025
6 7_wk      1        1     1000 0.025
```

Change the learning slope of the vehicle EndItems (2_GPV, 3_RV, and 4_SSV) to 90%

Edit the Excel sheet and reload into R…

```
new_cerberus <- load_config_data("new-data.xlsx")
```

Or modify the table directly in R

```
new_cerberus <- cerberus::cerberus
new_cerberus$learning$slope[1:3] <- 0.9
```
Inputs can easily be adjusted to generate a variety of data behaviors
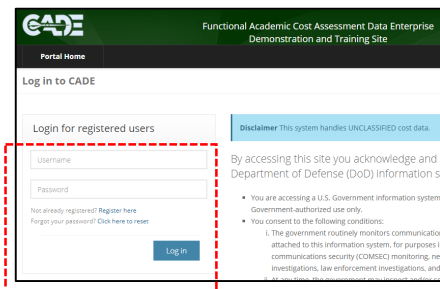

How To Access the Cerberus Training Dataset

OSD CAPE

The Cerberus Training Dataset is hosted within FACADE ("Fake CADE"), the training site for the "Cost Assessment Data Enterprise".

1. Navigate to https://cade.osd.mil/

2. Click the "FACADE" button in the top-right corner.

3. Login or signup.

4. For CSDR Plan, Contract Scope, CDRLs: Click "CSDR-SR" then "My CSDR", then "Program Planning", then "Search", and Type "Cerberus" into the "Program Name" field, click "Search Programs", click "Cerberus", click "Z-99-C1(R)", scroll down to "Documents", click an icon under "File" to download the given file.
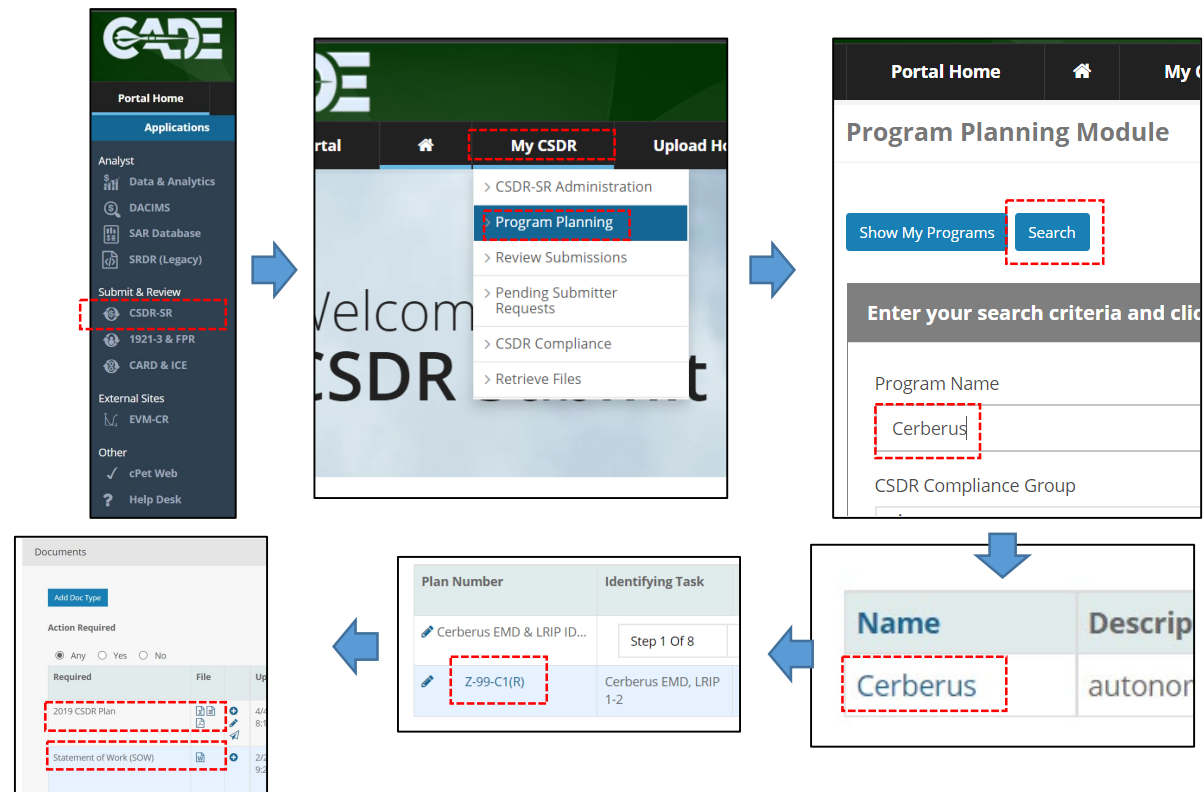

How To Access the Cerberus Training Dataset (cont.)

OSD CAPE

5. For deliverables (e.g., FlexFile, QDR, SRDR), from "Portal Home", click "Data & Analytics", click "CSDR Browse", type "Cerberus" into the "Program Field", submissions will be listed an can be clicked on individually or downloaded in bulk using the various download or export buttons.

How To Access the Cerberus Training Dataset (cont.)

OSD CAPE

6. For SAR data, from "Portal Home", click "SAR Database", either search for "Cerberus" or find and click it under "Surface Vehicle".

Path Forward / Call To Action

CADE Training Team is in the process of updating various OSD CAPE offered classes to utilize the Cerberus Training Dataset.

Cerberus Training Dataset Updates

- **v1.1 (in process)**
  - Includes "Percent Allocation Methods" to FlexFile
  - Includes/adds "Program Resource Distribution Table" and "Contractor Resource Distribution Table" files
- **Backlog**
  - Add Excel version of FlexFile and QDR's to FACADE
  - Create and include a Subcontractor CSDR Plan
  - Create and include a Subcontractor CSDR deliverable submission(s)
  - Add additional details to WBS Dictionary
  - Create and include a SRDR-MX deliverable submission(s)

Beyond "Cerberus Autonomous Vehicle"

- Add additional commodities & programs
- Include/induce:
  - Loss Learning
  - Production Breaks
  - Metadata drift
  - Missing data (waiver, enforcement issue)
  - Block Upgrades / Overhaul
  - Antecedent vs. Successor Comparison

Send feature requests or bug notices on Cerberus Training Dataset here: cadesupport@tecolote.com

Recommend the community utilize the Cerberus Training Dataset to…
- Develop training
- Practice using FlexFile's & see relationships between deliverables
- Demo your own models and techniques
- Develop and practice using tools, visuals, plots, etc.

{reviewcsdr} R Package

OSD CAPE

validation-config.xlsx

- Includes **456** data validation test criteria which are run against each deliverable.

FlexFile.zip

QDR.zip

{reviewcsdr}

SUBMISSION NAME-validation.xlsx

- Results of **456** data validation tests.
- Identifies combinations of, "Notes", "Warnings", and "Errors" to validation analysts.
- Identifies exactly which table, field, and cells are flagged for additional review.

SUBMISSION NAME-review.pptx

Includes standard plots of data
1. Total cost over time by REC vs. NR
2. PMP cost over time by WBS
3. Common cost over time by WBS
4. Unit cost by end_item_id
5. Unit cost by overall sequence
6. Recurring unit cost by order_lot_id
7. Labor rate by functional category over time
8. Overhead rate by category over time

- The R package is passed CSDR submissions by the user via a single function call (i.e., very easy to run even with limited R knowledge).
- The package automatically utilizes the build-in validation-config, runs all included tests, and exports a validation report to Excel and standard plots to PowerPoint.

**Requires limited knowledge of R to use.
Additionally tests and plots may be added over time.**
