

Preventing Targeted Violence and Terrorism Through Public Health-Informed Programs and Services

CP3 is dedicated to helping communities support individuals before they resort to violence. This approach is based on the principles of public health. It helps individuals and communities build protective factors that reduce the risk of targeted violence. These efforts help build strong and resilient communities.

The Social-Ecological Model: A Framework for Prevention (CDC)

CP3’s approach leverages decades of violence prevention experience and a wide range of partnerships. It reduces the risk of targeted violence by emphasizing wellness, investing in safety-net programs, and strengthening collaboration.

CP3’s Strategic Objectives

Curate the evidence base

Provide technical assistance

Provide financial assistance

Build a coalition of national partners

Create a culture of targeted violence prevention

Levels of Prevention

This public-health approach is based on four levels of prevention: *primordial*, *primary*, *secondary*, and *tertiary*. Each level offers opportunities to reduce the risk of targeted violence and creates opportunities for more partners to participate.

There are many benefits to adopting a public health-informed approach to violence prevention. The approach is holistic, multidisciplinary, evidence-based, and focused on building sustainable, long-term safety in all communities.

Levels of Prevention	Programs
Primordial Advocating to prevent the development of risk factors	Civic Engagement, Youth Resilience, Law Enforcement, Community Engagement
Primary Fostering resilient communities	Training and Awareness, Bystander Training, Social Cohesion Programming
Secondary Providing services to people at risk	Referral Services, BTAM, Intervention Services
Tertiary Supporting offenders to facilitate positive community re-entry	Rehabilitation and Reintegration Services, Post-Attack Recovery
