System Assessment and Validation for Emergency Responders

The U.S. Department of Homeland Security (DHS) established the System Assessment and Validation for Emergency Responders (SAVER) Program to assist emergency responders making procurement decisions.

Located within the Science and Technology Directorate (S&T) of DHS, the SAVER Program conducts objective assessments and validations on commercial equipment and systems, and provides those results along with other relevant equipment information to the emergency response community in an operationally useful form. SAVER provides information on equipment that falls within the categories listed in the DHS Authorized Equipment List (AEL). The SAVER Program mission includes:

- Conducting impartial, practitioner-relevant, operationally oriented assessments and validations of emergency responder equipment;
- Providing information that enables decision makers and responders to better select, procure, use, and maintain emergency responder equipment.

Information provided by the SAVER Program will be shared nationally with the responder community, providing a life- and cost-saving asset to DHS, as well as to federal, state, and local responders.

The SAVER Program is supported by a network of technical agents who perform assessment and validation activities. Further, SAVER focuses primarily on two main questions for the emergency responder community: "What equipment is available?" and "How does it perform?"

Digital Video Recorders

Digital Video Recorders (DVRs) can be used as a component of a surveillance system that receives video from analog or Internet Protocol (IP) video cameras. The DVR is integrated within the system to record the images for exporting or later viewing. Researching and identifying DVRs for procurement can be time consuming.

As a SAVER Program Technical Agent, the Space and Naval Warfare Systems Center (SPAWARSYSCEN), Charleston, has conducted a comparative assessment of digital video recorders for the SAVER Program. Prior to the assessment, SPAWARSYSCEN conducted a market survey in order to provide information on commercially available equipment, and produced the *Digital Video Recorder Market Survey Report*. A focus group was then conducted to identify equipment selection criteria for the assessment, determine evaluation criteria, and recommend assessment scenarios. The results can be found in the *Digital Video Recorder Focus Group Recommendations* report.

All reports in the series, including the *Assessment Report on Digital Video Records*, will be located on the SAVER Web site (<https://www.rkb.us/SAVER>) as they become available. Information on other technologies being evaluated in the SAVER Program can also be found on the Web site.
