System Assessment and Validation for Emergency Responders

The U.S. Department of Homeland Security (DHS) established the System Assessment and Validation for Emergency Responders (SAVER) Program to assist emergency responders making procurement decisions.

Located within the Science and Technology Directorate (S&T) of DHS, the SAVER Program conducts objective assessments and validations on commercial equipment and systems, and provides those results along with other relevant equipment information to the emergency response community in an operationally useful form. SAVER provides information on equipment that falls within the categories listed in the DHS Authorized Equipment List (AEL). The SAVER Program mission includes:

- Conducting impartial, practitioner-relevant, operationally oriented assessments and validations of emergency responder equipment;
- Providing information that enables decision makers and responders to better select, procure, use, and maintain emergency responder equipment.

Information provided by the SAVER Program will be shared nationally with the responder community, providing a life- and cost-saving asset to DHS, as well as to federal, state, and local responders.

The SAVER Program is supported by a network of technical agents who perform assessment and validation activities. Further, SAVER focuses primarily on two main questions for the emergency responder community: "What equipment is available?" and "How does it perform?"

Inverters

Inverters are devices used to convert direct current (DC) power to alternating current (AC) power for the operation of electrical equipment and tools when a conventional AC power source is unavailable. Emergency responders may encounter various scenarios that require the use of inverters, including illuminating portable lights, powering mobile incident command posts, operating medical equipment, charging batteries for equipment, and powering equipment installed in emergency service vehicles.

As a SAVER Program Technical Agent, Science Application International Corporation (SAIC) conducted a market survey in order to provide information on commercially available equipment, and produced the *Market Survey Report on Inverters*.

All reports in this series will be located in the SAVER section of the RKB Web site (<https://www.rkb.us/SAVER>) as they become available. Information on other technologies being evaluated by the SAVER Program can also be found on the Web site.
